Portlands Energy Centre: Achieving Even Lower Emissions

The Portlands Energy Centre (PEC) is continually striving to lower emissions and increase our efficiency while providing a reliable and safe energy supply to over 550,000 customers. When called upon, we are ready to meet the electricity needs of Toronto residents.

Combustion System Tuning and Upgrade:

During the week of June 1, 2009 we will be taking steps to improve our environmental performance by installing new operations control software to help decrease our emissions upon start-up of the facility.

To accomplish this PEC will be taken out of service for a day early in the week to allow the installation of the new software. Over the following few days we will be tuning the control systems to ensure proper operation. The upgrade should be complete by the end of the week.

The new software will allow us to reduce our start up emissions and the associated 'plume' that is visible during plant start-up.

Contact Us:

If you have any questions or concerns about our operations we encourage you to contact us.
